Get straighter teeth in weeks without braces

by June Portnoy

Langhorne dentist, Dr. Bharat A. Shah, D.D.S., will surely put a smile on your face by straightening your teeth in just six to 16 weeks, in most cases, without braces, using the Inman Aligner.

Dr. Shah is the only certified dentist in this area to offer this revolutionary appliance.

"The Inman Aligner is the perfect solution for crowding, protrusion, retraction and spacing of the front teeth," says Dr. Shah. It works by placing two clear bows behind your teeth activated by springs. The springs create gentle pressure that guides your front teeth into the ideal position. Only a clear plastic bow is visible on the front of your teeth. Since the pressure is gentle, any initial discomfort is minimal.

"The Inman Aligner is removable," describes Dr. Shah. "You'll need to wear it 15 to 20 hours a day, which means you can leave it home for a short time if you're going to a special event."

"This dental appliance is just as effective as braces," adds Dr. Shah. "The price for one arch starts as low as \$1,495, a great value for the results you receive in such a short time."

As compared to Invisalign, The Inman Aligner is much less expensive; requires you wear only one appliance, as opposed to changing trays every 10 to 14 days; and can be worn fewer hours during the day.

Dr. Shah is currently offering free teeth whitening to anyone receiving the Inman Aligner treatment.

Although the Inman Aligner can only be used on patients who have all their adult teeth, Dr. Shah provides effective orth-

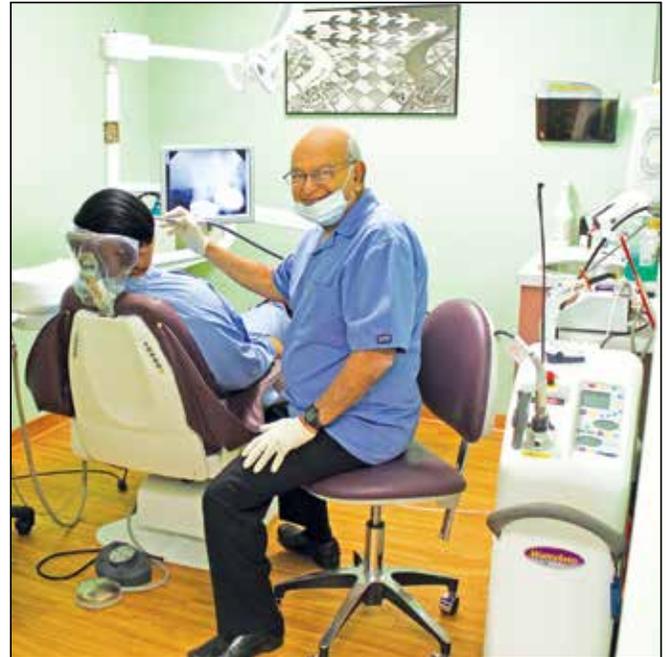

odontic treatment for children and teenagers using appliances other than braces.

Dr. Shah has practiced dentistry since 1986 after graduating from University of Pennsylvania School of Dentistry.

He has completed many additional courses to stay on the cutting edge of technology in the dental industry.

Since moving into his current office at 300 Middletown Boulevard, Suite 101, in 1995, he has been using laser treatment to replace the need for drilling and needles in most cases. Dr. Shah uses Hydro-Phototronics™ Technology Waterlase® Dentistry, a safe and gentle alternative to traditional dental tools. This patented technology combines YSGG (Yttrium Scandium Gallium Garnet) laser energy and a spray of water to perform a wide range of dental procedures, such as cutting teeth, gum treatment and stopping pain associated with hot or cold sensitivity on one's tooth. With Waterlase® Dentistry, Dr. Shah can perform many dental procedures with fewer shots, less need for anesthesia, less use of a drill, fewer numb lips and less bleeding. This method reduces the fear so many patients have about going to a dentist.

Still another high-tech device Dr. Shah uses is SNAP technology, cosmetic simulation software. For no charge, Dr. Shah can show you a before and after shot of your teeth on a monitor so you see how

cosmetic procedures will affect your smile before they are done.

Also, Dr. Shah has replaced metal dentures with Flexite, a light flexible plastic that blends right into your teeth. It's custom fitted so it fits perfectly.

As a private practitioner, Dr. Shah can offer patients personalized attention.

"I'd rather see fewer patients and give each one more time," says Dr. Shah. "Also, you'll virtually never have to wait to be seen."

Dr. Shah makes himself available for emergency visits by giving patients his cell phone number.

Although he treats patients starting at three-years-old, his mission is to help seniors. He strives to make his treatment affordable by accepting most major health insurances.

In addition, his staff works with patients to customize treatment plans so they are more affordable.
